

# cor

This code creates a correlation matrix to look at relationships between variables. This helps identify specific relationships of interest

[Link:](#)

## Getting Started

### Libraries

### Data

Site data sets have lags incorporated (made in MASTER\_MAKER.qmd)

## Cleaning

### Remove non-numeric variables

```
bo<-  
  bo %>%  
  select(!c(date, ...1))  
  
c2<-  
  c2 %>%  
  select(!c(date, ...1))  
  
rd<-  
  rd %>%  
  select(!c(date, ...1))
```

## Make Datasets for normal and non-normal variables

Variables that are normally distributed across all three sites will be in one df. All others will be in another.

```
#BLIND OSO
b_norm<-
  bo %>%
  select(!c(sal, secchi, nn, tdn, don, doc, toc, tn))
b_para<-
  bo %>%
  select(sal, secchi, nn, tdn, don, doc, toc, tn)

#CANALS
c_norm<-
  c2 %>%
  select(!c(sal, secchi, nn, tdn, don, doc, toc, tn))
c_para<-
  c2 %>%
  select(sal, secchi, nn, tdn, don, doc, toc, tn)

#GULF
r_norm<-
  rd %>%
  select(!c(sal, secchi, nn, tdn, don, doc, toc, tn))
r_para<-
  rd %>%
  select(sal, secchi, nn, tdn, don, doc, toc, tn)
```

## Log10 Transform non-normally distributed data for Norm df

Distributions can be found in 1\_distribution.qmd

```
#BLIND OSO
b_norm<-
  b_norm %>%
  mutate(amm = log10(amm), #Log-transforms data
         din_dip = log10(din_dip),
         dust = log10(dust),
         chl = log10(chl),
         dust_lag = log10(dust_lag))
```

```

#CANALS
c_norm<-
  c_norm %>%
  mutate(orthop = log10(orthop),
         dust = log10(dust),
         dust_lag = log10(dust_lag))

#GULF
r_norm<-
  r_norm %>%
  mutate(dust = log10(dust),
         dust_lag = log10(dust_lag))

```

## Correlation Matrix

There are different methods for **correlation analysis** : **Pearson parametric correlation test**, **Spearman** and **Kendall rank-based correlation analysis**. The default is [pearson correlation coefficient](#) which measures the linear **dependence** between two variables. [kendall](#) and [spearman](#) correlation methods are non-parametric **rank-based correlation test**.

### 1. Compute Correlations

If your data contain missing values, use the following R code to handle missing values by case-wise deletion.

```
cor(x, method = "pearson", use = "complete.obs")
```

### 2. Make Function to Format

Simple function for formatting a **correlation matrix** into a table with 4 columns containing : Column 1 : row names (variable 1 for the correlation test), Column 2 : column names (variable 2 for the correlation test), Column 3 : the **correlation coefficients**, Column 4 : the **p-values** of the correlations

```

flattenCorrMatrix <- function(cormat, pmat) {
  ut <- upper.tri(cormat)
  data.frame(
    row = rownames(cormat)[row(cormat)[ut]],
    column = rownames(cormat)[col(cormat)[ut]],

```

```
cor =(cormat)[ut],
p = pmat[ut])}
```

### 3. Make Matrix

The function `rcorr()` [in **Hmisc** package] can be used to compute the **significance levels** for **pearson** and **spearman correlations**. It returns both the correlation coefficients and the p-value of the correlation for all possible pairs of columns in the data table.

**NOTE THIS IS WITH DATA SETS PRIOR TO LOG TRANSFORMATION. SO EVERYTHING SPEARMANS.**

```
bclean<- rcorr(as.matrix(bo))
flattenCorrMatrix(bclean$r, bclean$p)
```

## Extract cor and p value

## Visualize with corrplot() function

The function `corrplot()` takes the **correlation matrix** as the first argument. The second argument (`type="upper"`) is used to display only the upper triangular of the **correlation matrix**.

## Just Normal Data

```

#Normal Data
corrplot(b, type = "upper",
         tl.col = "black", tl.srt = 45,
         title = "Blind Oso_Pearson", mar=c(0,0,1,0)) #Adds and lowers title

```

```
corrplot(c, type = "upper",
  tl.col = "black", tl.srt = 45,
  title = "Canals_Pearson", mar=c(0,0,1,0))
```

```
corrplot(r, type = "upper",
  tl.col = "black", tl.srt = 45, mar=c(0,0,1,0))
title(main = "Gulf_Pearson")
```

### All Spearman

```
#Non-Parametric Data
corrplot(b2, type = "upper",
  tl.col = "black", tl.srt = 45,
  title = "Blind Oso_Spearman_all", mar=c(0,0,1,0)) #Adds and lowers title
```

```
corrplot(c22, type = "upper",
         tl.col = "black", tl.srt = 45,
         title = "Canals_Spearman_all", mar=c(0,0,1,0))
```

```
corrplot(r2, type = "upper",
         tl.col = "black", tl.srt = 45, mar=c(0,0,1,0))
title(main = "Gulf_Spearman_all" )
```

## Everything

```
par(mfrow=c(3,3))
#Normal Data
corrplot(b, type = "upper",
         tl.col = "black", tl.srt = 45,
         title = "Blind Oso_Pearson", mar=c(0,0,1,0)) #Adds and lowers title

corrplot(c, type = "upper",
         tl.col = "black", tl.srt = 45,
         title = "Canals_Pearson", mar=c(0,0,1,0))

corrplot(r, type = "upper",
         tl.col = "black", tl.srt = 45, mar=c(0,0,1,0))
title(main = "Gulf_Pearson")

#Non-Parametric Data
corrplot(b1, type = "upper",
         tl.col = "black", tl.srt = 45,
         title = "Blind Oso_Spearman", mar=c(0,0,1,0)) #Adds and lowers title
```

```

corrplot(c1, type = "upper",
         tl.col = "black", tl.srt = 45,
         title = "Canals_Spearman", mar=c(0,0,1,0))

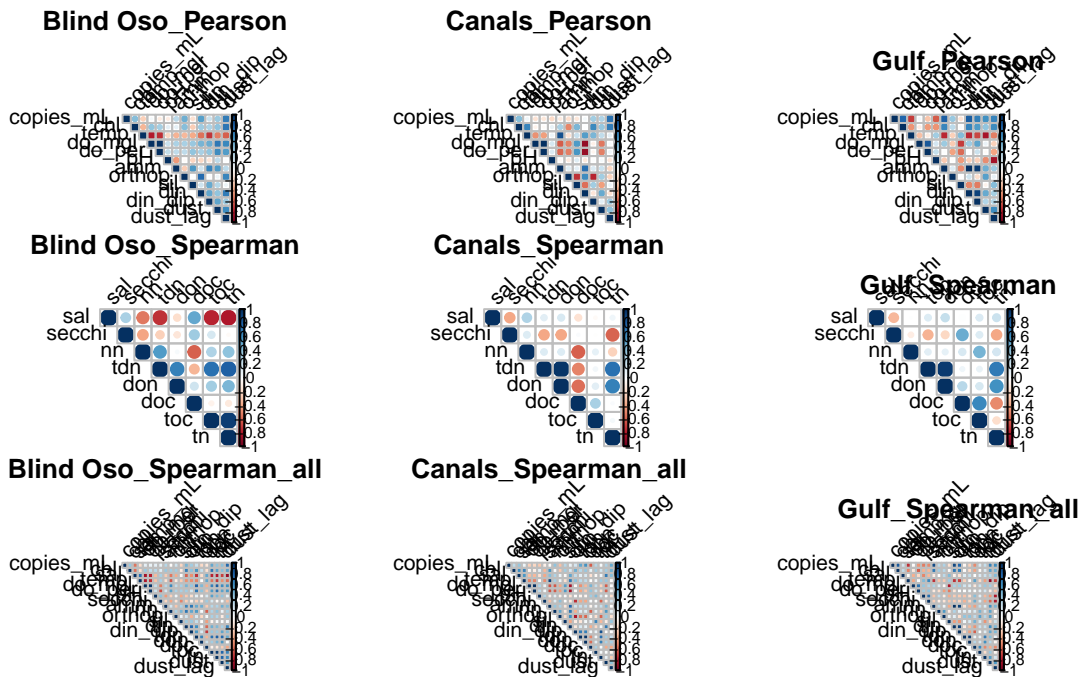

corrplot(r1, type = "upper",
         tl.col = "black", tl.srt = 45, mar=c(0,0,1,0))
         title(main = "Gulf_Spearman" )

#Non-Parametric Data
corrplot(b2, type = "upper",
         tl.col = "black", tl.srt = 45,
         title = "Blind_Oso_Spearman_all", mar=c(0,0,1,0)) #Adds and lowers title

corrplot(c22, type = "upper",
         tl.col = "black", tl.srt = 45,
         title = "Canals_Spearman_all", mar=c(0,0,1,0))

corrplot(r2, type = "upper",
         tl.col = "black", tl.srt = 45, mar=c(0,0,1,0))
         title(main = "Gulf_Spearman_all" )

```

## Correlation Tables

Load in data again to bypass earlier code

Rename Copies → Vibrio

```

`cor.mtest()`...". The output of that function produces a p-values matrix with zeroes on the diagonal. The output of `rcorr` produces a matrix of p-values with NA on the diagonal. Maybe you can just replace your NA diagonal values with zeroes. If you switch to `cor.mtest()` you'll need to be sure and understand all of its parameters.

```
